Environmental Planning Solutions, Inc.
Description of Key Projects

LaSalle County, Illinois Comprehensive Plan Update

EPSI served as a subcontractor to LEAMgroup in preparing an update to the LaSalle County Comprehensive Plan. LEAMgroup uses a complex computer model, Landuse Evolution and Impact Assessment Model, to analyze existing development patterns based on existing data and project future land use patterns based on input from the public, local officials, and running scenarios using LEAM. EPSI's role included:

- Public involvement. This required organizing and leading 4 public meetings, as well as meetings with key county leaders and organizations to solicit input for their comprehensive plan.
- Project management. EPSI was responsible for maintaining the schedule for the project and served as the key contact for local officials.

The final Comprehensive Plan can be found at: <http://lasalle.leadgroup.com/>.
